smoothwall

Smoothwall for your workplace

Suitable for SMEs through to Large Enterprises

Workplaces of all sizes face numerous web security threats, both internally and externally, therefore you need to make sure you are fully protected against any eventuality.

At Smoothwall we supply the tools to provide safe web access throughout your organisation, securing your network with malware scanning, content inspection, SSL decryption and much more. Our real-time content aware web filter also helps protect your organisation against information your colleagues are trying to access.

The solution will be defined for each individual organisation, taking into account factors such as the number and concentration of users, the intensity of usage and the distribution of sites geographically.

“The overall manageability and visibility of the system is absolutely invaluable to me”

Matthew Swain, Shearline Precision Engineering

Key Features

Real-time Content Analysis

Identify and filter brand new web content in real-time long before URL block lists, to prevent any unwanted material being viewed.

Next Generation Firewall

Protect your network against all web and non-web borne threats with perimeter firewall and internal segmentation firewall. The firewall rules are simple to create and manage.

Gateway Anti-Malware

Our market leading anti-malware solution powered by BitDefender will protect your network from web borne malware attacks and includes HTTPS protection.

Application Control

Filtering of non web-based applications by identifying over 100 common application protocols, enabling you to allow or block them.

Bandwidth Management

Intelligently manage and allocate your bandwidth to minimise the impact media and file sharing can cause, and optimise cloud based applications without the need to fully block services.

Reporting

With full visibility of web and network activity, you can provide reports in real-time by using any of the 300 report templates.

The Next Step

At Smoothwall we understand that flexibility is key and with a variety of different deployment options available we're confident we can help find a solution to suit your individual needs.

Addressing the challenge of security

All networks are potentially vulnerable to cyber attacks, the result of which can be detrimental financially as well as on customer confidence.

The number of breaches are on the rise, topping 1.6bn in 2016 (IT Governance), which is found to cost UK businesses up to £1m (BAE Systems). Therefore it is essential for organisations to ensure they have a robust security system in place to mitigate the risks and safeguard their data. This not only applies to large organisations, but firms of any size so that if a breach does occur, they are able to recover and instil customer confidence as soon as possible.

Smoothwall's primary concern is the security of your business infrastructure and protecting against attacks. Combine our real-time anti-malware with real-time content web filter analysis for enterprise grade protection against both internal and external security threats. Smoothwall scans all websites and can even decrypt HTTPS websites.

A flexible solution that fits every business

It is essential that your security solution fits seamlessly into your environment.

SMEs

As a small business, putting in enterprise level protection can sometimes seem like an unnecessary expense. Smoothwall have dedicated desktop appliances to cater for small businesses who require the same protection and real-time content web filtering.

Large Enterprises

With high volumes of users, ensuring you are protected against targeted attacks and other vulnerabilities is essential, especially as your business may be the focus of external threats.

Here at Smoothwall we recognise that business networks are varied. Our solutions have been designed to be flexible, ensuring they integrate with all network types and can be customised to suit the needs of you and your company. With four types of deployment, we can work with you to ensure minimum disruption with maximum protection.

“Since installing Smoothwall we’ve stopped excessive time and bandwidth wastage on websites like YouTube.”

Chris Smith
James Durrans Group

“We now make the most of the internet connection, controlling who can access what, at any given time of the day - whilst also optimising bandwidth.”

Filipe Pedro
