

# FD MONITOR

## Intelligent Monitoring for Schools

### Protecting students from harm

Offering an intelligent and effective monitoring solution for safeguarding in schools, FD Monitor is a real-time monitoring solution that alerts safeguarding staff to incidents as they happen. With a pre-graded severity alert system, safeguarding staff can be safe in the knowledge that they can identify incidents rapidly should there be a need for urgent concern.

The intuitive and highly visual console uses heat maps which allows you to easily evaluate themes in student activity occurring online and offline in real-time, both during and outside of school hours. Intelligent pre-grading of incidents reduces the number of false positives meaning you can concentrate on providing support and education to the children in your care.

Complying with UK legislation including the Prevent Duty, Keeping Children Safe in Education and Ofsted, you can rest assured that digital devices in your school are fully protected.

### Intelligent pre-grading

### Content analysis

### Real-time moderation

### Intuitive interface

### Why is safeguarding monitoring software needed?

Active monitoring software is a KCSIE legislative requirement in schools. The software helps pick up on thoughts that children can't say aloud, related to:

- Suicidal thoughts
- Eating disorder
- Radicalisation
- Cyberbullying
- Sexual grooming
  - Self-harm
  - Racism
- Depression

# Key Features:

## Intuitive Interface

All incidents are displayed using highly visual heat maps and graphs, allowing you to quickly review performance, view individual alerts and view system information.

## Auto Pre-Grading

Artificial Intelligence uses up-to-date risk libraries to automatically assign a level of risk to each incident, improving performance and reducing false positives.

## Image Capture

Screen capture functionality sits within the solution, allowing any incidents that require investigation to be screen grabbed for later review or evidence.

## Real-Time Moderation

Content is auto-moderated and pre-graded in real-time, allowing you to promptly identify and deal with issues of concern as they occur.

## Multi-language Support

Able to monitor multiple languages including slang, colloquialisms, euphemisms and more.

## Reports

You can generate reports to view the activity of individuals and groups, and enable automatic reports.

## Content Analysis

Monitors everything a user types and everything displayed on the screen.

## Flexible Data

Easily look at, add and remove individual users ensuring you are GDPR compliant.

## Alerts

Alerts can be sent in real-time and can be customised by risk level.

## Updates

Easy to install technology with remote install options and updates.

## Multi-device Support

Available on Windows, macOS and iOS, including Chrome OS.

## Cloud-based Storage

No requirement for any local server infrastructure.

FD Monitor is a fully scalable multi-device offering which allows us to provide the most cost-effective solution to suit your requirements. To find out how FD Monitor can safeguard your users, please get in touch.

“FD Monitor enables the ICT Development Service to deliver our gold standard e-safety monitoring.”
