

SWG

Secure Web Gateway

A Secure Web Gateway to protect your users

SWG from Smoothwall analyses and categorises web content in real time, without relying on URL blocklists which can quickly become outdated. Whether protecting you from inappropriate or illegal content, anonymous proxy usage, malware, or simply wasted resources, you can rely on zero day protection.

The SWG Web Filter combines a powerful reporting suite, real-time activity monitoring, bandwidth optimisation and social media controls, allowing you to see and control everything your users do on the web - even when they're taking your devices on the road or using their own devices on the network.

Real-time content aware filtering

BYOD functionality

Flexible deployment options

Social media controls

Smoothwall's SWG offering is designed as a transferable solution that can be tailored for organisations within education, government, healthcare and corporate business sectors.

For sector specific information, please request a brochure at smoothwall.com/evaluate

smoothwall

Key Features:

Content-Aware Analysis

Categorises new content into over 100 filter categories in real-time, with a proprietary URL database that is updated daily. Easily block advertising and cookies, customise the fully configurable blockpages and implement flash filtering.

Gateway Anti-Malware*

Identifies signatures of malicious content at the gateway to protect against known and zero-day threats. Anti-spam provides advanced protection against email fraud, phishing and spam. Powered by Bitdefender.

On Device Filtering

Enforce web usage policies on all devices through Smoothwall Connect, even when not connected to your network. The Connect Filter protects iOS, Mac OS, Chromebooks and Windows clients and devices.

Daily Reports & Alerts

Schedule customised reports on user activity that export to PDF, Excel and HTML, access a live view of users web activity and receive notifications for policy breaches and network outages.

Safeguarding

The safeguarding reporting suite notifies you of any safeguarding risk against seven category rulesets, including radicalisation, suicide and self-harm, allowing you to protect your users from harm.

Authentication

Easily integrates with Active Directory, Google, Open Directory and more. Supports authentication with Kerberos, NTLM, mixed mode, RADIUS, Chromebooks, and SSL portal authentication.

Search Filtering

Create filter and block policies for specific search terms, enforce Safesearch on search engines and access live views of users web activity using customisable reports.

Multi-Tenant Management

Allows you to control and manage all of your organisations in one system, as well as running individual site reports and creating local filtering policies.

Portal Access

Allows selected staff members to modify block lists, access reports, alter bandwidth configuration and test access using the policy test tool.

Social Media Controls

Flexible tools allowing you to implement read-only access, block social gaming, control posts to web forums and restrict YouTube.

Who, What, Where, When

Build policies based on user or user group, content category, time, location IP, subnet and hostname for mobile devices and laptops.

Layer 7 Application Control*

Also known as Deep Packet Inspection (DPI) and allows you to control non-web traffic such as Skype and BitTorrent.

BYOD

Offer public Wi-Fi filtering and filter guest mobile devices securely on your network across all platforms.

Bandwidth Optimisation*

Limit bandwidth use by content type, user, time and location, and web proxy cache.

HTTPs Filtering

Filter Secure Socket Layer (SSL) traffic, including secure anonymous proxies.

*Available at an additional cost.

“Smoothwall’s filtering solution has been a lot easier to manage, and the support we have received from Smoothwall has been second to none.”
Worcestershire County Council
